UNDER SECRETARY OF COMMERCE FOR INTELLECTUAL PROPERTY AND
DIRECTOR OF THE UNITED STATES PATENT AND TRADEMARK OFFICE

April 17, 2006

PERMAN & GREEN, LLP
425 POST ROAD
FAIRFIELD, CT 06430
US

Dear Sir/Madam,

Your refund request for 09801985 in the amount of \$200.00 has been denied .

On the admendment you have 4 new claims and previously paid for 3 so you were charged for 1.

Sincerely,

ELEANOR KURTZ
Technical Center Others

PETITION FOR REFUND TO DEPOSIT ACCOUNT

Sir:

Pursuant to 37 C.F. R. §1.26, Applicant, requests that the
amount of \$200.00 be refunded to Deposit Account #16-1350.
Applicant disputes the charge listed below:

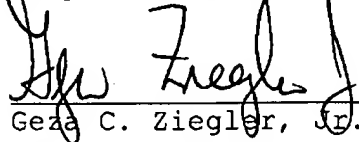

02/08/06 09801985 460-010145-US (PAR) 1201 \$200

A copy of the Deposit Account statement is attached hereto.

The charge should not have been made. The amendment filed on
January 26, 2006 had 4 new claims added although 7 previously
paid claims were cancelled. Thus, there is no basis for the
charge.

Accordingly the amount of \$200.00 should be refunded to Deposit
Account #16-1350.

Respectfully submitted,

Geza C. Ziegler, Jr.

AMENDMENT UNDER 37 C.F.R. §1.114

I. INTRODUCTION

This is in response to the Office Action mailed August 26, 2005 and subsequent Advisory Action mailed December 20, 2005 in regard to the above-identified patent application. Reconsideration of the rejection of the claims is respectfully solicited in light of the following amendments and remarks.

II. CLAIMS

1. (Currently Amended) An electronic device, which is a wireless auxiliary device to be used with another electronic device and provided with means for manual entering of a key code, wherein said wireless auxiliary device is a smart card reader or a hands-free set, wherein said means for entering of a key code comprise at least one selector which is arranged to select said key code or an element of it, and wherein a secure wireless data transmission link is arranged to be set up between said auxiliary device and said another electronic device, ~~by means of~~ by using the selected key code, wherein said another electronic device is a mobile phone.
2. (Previously Presented) The electronic device according to claim 1, wherein the key code is a secret key code or a security code, such as a PIN code.
3. (Previously Presented) The electronic device according to claim 1, wherein the selector is rotatable, comprising a roll, wheel or disc part which is arranged to rotate around an axis of rotation which is substantially perpendicular or substantially parallel to the auxiliary device.
4. (Previously Presented) The electronic device according to claim 1, wherein the auxiliary device comprises one, and only one, selector which is arranged for entering a key code consisting of at least two elements, such as numbers.

5. (Previously Presented) The electronic device according to claim 1, wherein the key code consisting of at least two elements, such as numbers, is arranged to be entered by successive selection sequences, wherein each selection sequence corresponds to one said element.

6. (Previously Presented) The electronic device according to claim 1, wherein, to accept the already selected key code or its selected element, said selector is arranged to be pressed.

7. (Previously Presented) The electronic device according to claim 1, wherein the auxiliary device further comprises means to detect the selected key code and to store it in the memory of the auxiliary device, the means comprising a position detector which is arranged to read the key code selected by the selector, and a processor controlling the operation, for processing and storing the key code in the memory.

8. (Cancelled)

9. (Previously Presented) The electronic device according to claim 5, wherein said selection sequence is composed of at least one predefined position of the selector, or at least one predefined motion of the selector, or a combination of said position and said motion.

10. (Previously Presented) The electronic device according to claim 9, wherein the secure wireless data transmission between said auxiliary device and said another electronic device is arranged to be performed by using a wireless communication method, such as Bluetooth, WLAN or IrDA.

11. (Currently Amended) A method for entering a key code into an electronic device operating as an auxiliary device of another electronic device and being provided with means for manual entering of the key code, wherein said auxiliary device is a wireless smart card reader or a hands-free set and said another electronic device is a mobile phone, the method comprising:

selecting said key code by using at least one selector, which is arranged for the selection of said key code or its part, and

setting up a secure wireless data transmission link between the auxiliary device and said another electronic device ~~by means of~~ by using the selected key code.

12. (Previously Presented) The method according to claim 11, the method comprising:

selecting the key code by rotating each rotatable selector in a predetermined position corresponding to the key code.

13. (Previously Presented) The method according to claim 11, the method comprising:

selecting the key code by rotating one, and only one, rotatable selector in predetermined successive positions corresponding to the key code.

14. (Previously Presented) The method according to claim 13, the method comprising:

rotating the selector a predetermined number of revolutions between the different positions.

15. (Previously Presented) The method according to claim 11, the method comprising:

selecting the key code by rotating one, and only one, rotatable selector into predetermined successive positions corresponding to the key code in such a way that the direction of rotation is always changed to the opposite between the different positions.

16. (Previously Presented) The method according to claim 11, wherein the key code comprises a number, the method comprising:

selecting the key code by rotating the rotatable selector a number of revolutions corresponding to said number in the same direction.

17. (Previously Presented) The method according to claim 11, wherein the key code comprises at least two numbers, the method comprising:

selecting the key code by rotating one, and only one, rotatable selector the number of revolutions corresponding to the number in the same direction, and by changing the direction of rotation to the opposite between successive numbers.

18. (Previously Presented) The method according to claim 11, the method comprising:

accepting the already selected key code or its selected part by changing the direction of rotation of the rotated selector or by pressing said selector or by pressing a control button provided in the auxiliary device.

19. (Previously Presented) A wireless device and an auxiliary device, said auxiliary device being a smart card reader or a hands-free set arranged to operate in a wireless manner and provided with means for manual entering of a key code, wherein said means for entering a key code comprise at least one selector arranged to select said key code or an element of it, and wherein a secure wireless data transmission link is arranged to be set up between said auxiliary device and said wireless device being a mobile phone, by using the selected key code.

20. (Cancelled)

31. (New) A peripheral device of claim 28, wherein said peripheral device is a smart card reader and said another electronic device is a mobile phone.

III. REMARKS

1. Claims 1, 11 and 19 are amended. Claims 28-31 are new.

It is respectfully submitted that claims 1, 11, and 19, as amended, are patentable over the cited art of record. The Examiner's statement that Tait performs the functions of a wireless smart card reader [in that] the credit card information is read and stored electronically, referring to Col. 4, lines 45-65. Tait teaches that the PROM chip 20 electronically stores the owner's personal credit number. (Col. 4, lines 49-53). The information in the PROM 20 is only transferred if the correct PIN number is inserted via the key pad. (Col. 4, lines 55-59). Tait discloses storing the credit card number, not reading it. Nothing in this section, or anywhere else in Tait, discloses or suggests the functions of a wireless smart card.

For all of the foregoing reasons, it is respectfully submitted that all of the claims now present in the application are clearly novel and patentable over the prior art of record, and are in proper form for allowance. Accordingly, favorable reconsideration and allowance is respectfully requested. Should any unresolved issues remain, the Examiner is invited to call Applicants' attorney at the telephone number indicated below.

A check in the amount of \$1240 is enclosed for a two-month extension of time and the RCE fee. The Commissioner is hereby authorized to charge payment for any fees associated with this communication or credit any over payment to Deposit Account No. 16-1350.

Respectfully submitted,

PETITION FOR REFUND TO DEPOSIT ACCOUNT

Sir:

Pursuant to 37 C.F. R. §1.26, Applicant, requests that the
amount of \$200.00 be refunded to Deposit Account #16-1350.
Applicant disputes the charge listed below:

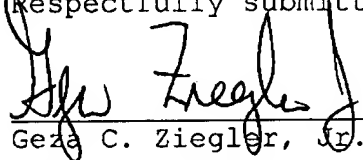

02/08/06 09801985 460-010145-US (PAR) 1201 \$200

A copy of the Deposit Account statement is attached hereto.

The charge should not have been made. The amendment filed on
January 26, 2006 had 4 new claims added although 7 previously
paid claims were cancelled. Thus, there is no basis for the
charge.

Accordingly the amount of \$200.00 should be refunded to Deposit Account #16-1350.

Respectfully submitted,

Geza C. Ziegler, Jr.
